

Wespark Platform Operation System Standards Series: Agent Construction

Agent Construction and Knowledge Management

01

Fundamentals of Wespark Agent Cognition

Introduction to Wespark Agent

1

Product Positioning

Developed based on the WorkBrain Large Language Model, Mingto Agents focus on human-machine collaboration and virtual-physical integration. The platform delivers core capabilities including an agent cloud platform and multi-terminal adaptation, and has been implemented across multiple sectors including government services, cultural tourism, healthcare, education and corporate business.

2

Core Advantages

Featuring cutting-edge technologies, the platform supports few-shot learning and dynamic knowledge updates, along with real-time multimodal interaction. With powerful scenario-oriented service capabilities, it supports customizable 3D avatars and delivers personalized services to satisfy diverse industry-specific demands.

3

Application Scenarios

Government Services: Enables intelligent service guidance and data visualization, significantly improving service completion rates and operational scheduling efficiency.

Education and Training: Integrates AR practical training with learning analytics to substantially enhance students' hands-on skills and teachers' lesson preparation efficiency.

Enterprise Operations: Integrates OA and ERP systems to enable intelligent contract review, effectively shortening approval lead time.

Agent Application Model

Building Service-Oriented Agents: Adopt a Human-Centric Paradigm to Develop an Integrated Growth System Covering Role, Core Brain, Knowledge, Capability, Task, and Social Interaction.

End-to-End Workflow for Agent Construction

Data Preparation

Data preparation constitutes a critical phase in the development workflow, as it directly determines the learning efficacy and ultimate performance of the intelligent agent.

Position Definition

Define Application Scenarios

Begin by identifying the specific scenarios in which the agent will be deployed, as distinct contexts impose disparate data requirements.

Define User Personas

Characterize the attributes of the target user population to facilitate the collection and generation of data that closely aligns with user expectations.

Data Cleaning

Format Standardization

Standardize data from heterogeneous sources into a unified format to facilitate subsequent processing.

Data Augmentation

Enhance data diversity through techniques such as rotation, scaling, and cropping, particularly for image datasets.

Data Collection

Employ both automated and manual collection methods. Depending on the data source, either automated learning or manual collection may be adopted, drawing from sources such as public databases, questionnaires, social media data acquisition, user interaction logs, and other relevant channels.

Data Annotation

Annotate images and videos with descriptive content labels and bind effective tags to them. Multimodal annotation can be performed within rooms.

Data Feeding Principles

Data shall cover a wide range of topics, sentiments, contexts, and other dimensions to enrich the knowledge base and expressive capacity of the intelligent agent.

Data should reflect real-world conditions as closely as possible, with synthetic or exaggerated content minimized to enhance the credibility of the agent.

All data must comply with applicable laws and regulations, respect privacy, and exclude sensitive or infringing information.

Data shall be updated on a regular basis to ensure that the agent remains responsive to the latest developments and emerging trends.

Data Feeding Standards

Content Coverage Rate: Digital humans shall cover the core information of industry-specific posts. Taking Xiling Snow Mountain as an example, coverage includes but is not limited to Yin-Yang Boundary, Riyueping Meadow, Ski Resort, Panda Forest, Hongshijian Peak, and Sea of Clouds, among others, achieving a coverage rate of over 90%.

QA Pairs (Question & Answer)	Quantity Requirements	• Initial Base Library: Include at least 50 high-quality Q&A pairs covering common questions and domain-specific knowledge. • Continuous Updates: Add new entries monthly and adjust contents based on user feedback and trending topics.
	Quality Requirements	• Questions shall be representative; answers shall be accurate, concise, and unambiguous. • Diverse answer styles are encouraged to enhance interactive engagement. • All Q&A data shall be added to the knowledge base, bound with agent tags, and displayed as recommended questions.
Documents	Quantity Requirements	• Coverage Breadth: Ensure broad coverage of core knowledge points within the agent's target domain to eliminate knowledge gaps. • Moderation: Avoid redundancy to prevent information overload that may confuse the model.
	Quality Requirements	• Accuracy: Sources shall be authoritative and credible; outdated, erroneous, or overly subjective information shall be excluded. • Structuring and Readability: Content shall be logically structured and properly formatted to facilitate machine parsing (e.g., Word, PDF, tables), avoiding cluttered or unstructured text.
Images	Quantity Requirements	• Initial Dataset: Include at least 10 high-definition, watermark-free images covering diverse scenarios. • Regular Supplements: Add approximately 10 images monthly, with attention to fashion trends and user preferences.
	Quality Requirements	• High resolution and clarity, suitable for display across various screen sizes. • Image filenames shall be accurately labeled with content descriptions to facilitate model understanding and multimodal support.
Videos	Quantity Requirements	• Initial Library: Include at least 5 videos covering varying lengths, styles, and themes. • Dynamic Updates: Add at least 2 videos monthly, with attention to trending topics and user behavior patterns.
	Quality Requirements	• Videos shall be clear, smooth, and watermark-free, with high audio quality. • Content must be wholesome and lawful, free from violence, pornography, or other objectionable material.
Capabilities		• Bind specialized capabilities to curated agents to enhance differentiation and professional competency.

Acceptance Criteria

Acceptance Module	Curated Agent Acceptance Criteria	Non-Curated Agent Acceptance Criteria
I. Role Definition	Naming Convention: Names shall be concise and clear, reflecting industry and functional positioning (e.g., Health Manager Wang, Bashan Grand Canyon).	Naming Convention: Consistent with curated requirements (concise, clear, and reflective of industry and functional positioning).
II. Agent Avatar Design & Production	Visual Clarity: Clear edges without aliasing, clean background, and complete details (hair, clothing textures, etc.). Motion Fluency: Natural transitions in body movements and expressions; lip-sync and blinking shall be synchronized; no stuttering or frame-skipping. Positioning Consistency: Art style, professional features, and motion design shall be consistent with the defined role. Format Specifications: – Full-body GIF: 750px (W) × 1172px (H) – Half-body GIF: 800px (W) × 800px (H) – Output format: QuickTime; transparent backgrounds shall retain RGB + Alpha	No custom avatar required; the system will assign an appropriate avatar. Avatar style shall be consistent with the role definition; after completion, the agent shall be added to the corresponding space. A background image shall be designed to match the agent's positioning (dimensions: 1920×1080).
III. Knowledge Feeding	QA Quality & Tag Binding: – At least 50 high-quality Q&A pairs, covering common questions and domain-specific knowledge. – Room-based dialogue knowledge and default QA shall be enabled. – Answers shall be accurate, concise, and unambiguous; each Q&A pair shall be bound with tags. – Images and videos shall be supplemented with content descriptions.	QA Quality & Tag Binding: – At least 15 high-quality Q&A pairs, covering common questions and domain-specific knowledge. – Room-based dialogue knowledge and default QA shall be enabled. – Answers shall be accurate, concise, and unambiguous; each Q&A pair shall be bound with tags (quality requirements consistent with curated standards). – Images and videos shall be supplemented with content descriptions.
	Document Structuring & Multimedia Annotation: – Documents: At least 10, with clear logic and standardized formatting, covering core knowledge points (not entirely AI-generated); sources shall be authoritative and error-free. – Images: At least 10 high-definition, watermark-free images, annotated with content descriptions and tags, covering diverse scenarios. – Videos: At least 4–6, clear, watermark-free, with good audio quality; filenames shall match the topic; no objectionable content. – All materials shall be free from infringement risks.	Document Structuring & Multimedia Annotation: – Documents: At least 4, with quality requirements consistent with curated standards (authoritative, error-free, and logically clear). – Images: At least 4, with quality requirements consistent with curated standards (high-definition, watermark-free). – Videos: At least 2, with quality requirements consistent with curated standards (clear, watermark-free, no objectionable content). – All materials shall be free from infringement risks.
	Knowledge Base Compliance: Content shall be original or properly licensed; information shall be current and timely; no non-compliant, false, or discriminatory content.	Knowledge Base Compliance: Consistent with curated standards (original or licensed content, timely information, no non-compliant content).

Acceptance Criteria

Acceptance Module	Curated Agent Acceptance Criteria	Non-Curated Agent Acceptance Criteria
IV. Room Configuration	Background Image Design: – Web dimensions: 1920×1080; Mobile dimensions: 750×1624 – Menu icon dimensions: 300×300 (may be AI-generated or downloaded from the internet).	Background Image Design: – Dimensions consistent with curated standards (Web: 1920×1080, Mobile: 750×1624, Icon: 300×300).
	Menu Bar Functionality: – Sections shall be clearly categorized (e.g., Introduction, Resource Library, Images, Videos, etc.). – Content shall be complete and accessible, including: 8+ documents, 10+ images, and 4+ videos. – Menu content shall be consistent with the role positioning.	Menu Bar Functionality: – Sections shall be clearly categorized (e.g., Introduction, Resource Library, Images, Videos, etc.). – Content shall be complete and accessible, including: 3+ documents, 4+ images, and 1+ video. – Menu content shall be consistent with the role positioning.
	Capability Scenarios (Mandatory): – Design industry-specific features; may integrate AR/VR experience links, ticketing/booking portals, official website redirects, and tool/service platforms. – For store-based offerings, add official website redirect and in-store purchase entry.	Capability Scenarios (Non-Mandatory): – May design industry-specific features (e.g., AR/VR integration, ticketing/booking, etc.). – For store-based offerings, it is recommended to add official website redirect and in-store purchase entry.

Step 1 – Registration

Agent Creation Portal: Wesome AI | Agent Workforce

For first-time login or registration, users may access the platform by entering a verification code received via their mobile phone number.

The image shows the Wesome AI registration process. A modal window is open over the main application interface. The modal has a title bar with the Wesome AI logo and a close button. It contains a 'Sign in with Google' button, an email input field with the placeholder 'Please enter your email address', a password input field with a red error message 'Password needs 8-16 characters, including uppercase letters, lowercase letters, numbers, or special characters', a confirmation password input field with the placeholder 'Please enter a confirmation password', a verification code input field with the placeholder 'Please enter the verification code' and a 'Send verification code' button, a 'Log in' link, a 'Register' button, and a checkbox for agreeing to the 'User Agreement' and 'privacy policy'.

Familiarizing with the Interface

The image shows a screenshot of the Wesome AI interface with several sections labeled on the left side. The interface is divided into a left sidebar and a main content area. The sidebar contains sections for 'My AI agent', 'Recent Conversations', 'My Ability', 'My Social', and 'Data Management'. The main content area features a top navigation bar, a 'My AI agent' section, a 'Recent Conversations' section, a 'My Ability' section, and a 'My Social' section. The 'My AI agent' section lists agents like 'agentleownicho...', 'Welcome Guide', 'Alex Test', and 'Sang Kancil Gui...'. The 'Recent Conversations' section shows a list of recent conversations. The 'My Ability' section lists capabilities like 'Task Arrangement', 'AI Writing', and 'Creative Painting'. The 'My Social' section shows a list of social connections. The 'Data Management' section shows a list of data management options. The main content area also includes a 'Petronas Twin Tower' travel guide, a 'Create space' button, and a grid of avatars representing different users or agents.

My Agents

Recent Conversations

Capability Addition

My Social (Follows / Visitors)

Data Management

Step 2 – Role Identity and IP Settings

Upon user login, the system will automatically assign a default username. The platform supports multiple intelligent agents; however, all agents shall share this single username.

You may purchase Photon credits or modify your account password.

The screenshot shows a form titled 'Fill in the basic information' with a 'save' button. The form fields are: 'Nick name' (filled with 'userleownicholas'), 'Industry' (dropdown menu with 'Please select your industry'), 'Post' (text input with 'Enter position name'), 'Time Zone' (dropdown menu with 'Asia/Shanghai'), and 'Country/Region' (dropdown menu with 'Please select'). There is also an 'Interest tags' section with a text input field containing the placeholder 'Add tags of interest (Press Enter to confirm), such as: What information do you want your assistant to help you get...'. A red box highlights the 'Basic information' title and the 'Nick name' field.

Step 2 – Role Identity and IP Settings

Upon successful registration and login, navigate to the Agent Configuration panel, where you may configure the agent's name, voice, attributes, role definition, opening remarks, and avatar.

Role Definition

Role definition involves specifying the agent's core identity, capabilities and skills, goals and motivations, as well as its linguistic style and catchphrases, thereby enabling the agent to better understand and respond to user needs.

Conversation

Upon completion of the configuration, the digital human possesses general conversational capabilities, and the large language model will automatically recommend topics of interest based on your role-specific attributes. Congratulations — you have successfully built an intelligent agent from the ground up!

Self-Growth Reflection

SP Hi, welcome toSingapore Polytechnic

hello! Welcome to our team space. I hope that the coming days, whether busy or relaxing, will be as smooth and smooth as the good weather. Let's go for it together!

I can give a quick general answer in the meantime:

- Many institutions abbreviated "SP" do provide visitor drop-off points near their main entrance or reception.

- Typical locations: main vehicle entrance, visitor/short-term parking bays, taxi/ride-hail setdown zones, or a designated accessible drop-off near building lifts.

Enter your query...

Hi, welcome to Hue UNESCO Heritage Center

hello! Welcome to our team space. I hope that the coming days, whether busy or relaxing, will be as smooth and smooth as the good weather. Let's go for it together!

- Which time: right now, today, or a multi-day forecast (e.g., next 7 days)?

- Preferred temperature units: Celsius or Fahrenheit?

Examples you can type:

Enter your query...

Step 3 – Feeding Private Knowledge

Navigate to "Data Management" to access the agent's knowledge management interface, where you may upload private knowledge materials, including documents, images, videos, and other relevant files, for feeding and training.

1. Navigate to "Data Management": The interface shows the "Data Management" section selected in the left sidebar.

2. Upload Documents: The "Data Management" interface displays a list of uploaded files under the "document" tab. The files include:

- outdoorstuff.jpg (Studied 15.77K 15:38)
- groupstuff.jpg (Studied 280.06K 15:38)
- globalexchange.jpg (Studied 248.22K 15:34)
- global-exposure_1.jpg (Studied 28.63K 15:34)
- global-exposure-img.jpg (Studied 85.61K 15:34)
- globalexposurelecture.jpeg (Studied 21.26K 15:34)

3. QA (Question & Answer): The "QA list" tab is selected, showing a list of questions and answers. The first question is:

1) 职业/简历建议 (写简历、

The "Edit file description" modal is open, showing the file "outdoorstuff.jpg" and its description:

This image captures a volunteer tree-planting event in an urban green space: four young people are gathered around a newly planted sapling in an area of loosened soil, flanked by lawns. From left to right, the first person wears a gray T-shirt and black trousers, holding a long-handled tool;

The modal includes an "AI optimization" button and a character count (295 / 300).

Step 3 – Feeding Private Knowledge

To achieve precise question-answering capabilities, add a QA knowledge base to the agent and bind relevant document tags to delimit its knowledge scope.

Includes organizational structure, workflow, and skills spectrum, presenting the position's place within the department, daily work steps, and skills weight comparisons through visual charts.

04

Job Vision

Includes trend interpretation and skill enhancement, featuring video content on future industry prospects, communication techniques, operational tutorials, and more.

Cultural Tourism

1

Scenic Spot Introduction

Includes core attractions, historical background, and practical information, such as attraction introductions, historical research, opening hours, ticket prices, and more.

2

Travel Guide

Includes route planning, seasonal highlights, and unique experiences, offering themed tour routes, seasonal event guides, special activity reservations, and more.

3

Video Showcase

Includes documentaries and instructional shorts, such as scenic area documentaries, photography composition tutorials, and more.

4

Scenic Gallery

Includes attraction photo collections, food sharing, and traditional costumes, showcasing the scenic area's seasonal scenery, local specialties, traditional attire, and more.

5

VR Cloud Tour

Supports integration of VR virtual scenic spot real-scene experiences, with one-click access to online roaming, creating an immersive interactive experience.

6

Online Ticketing

Supports embedding direct links to the scenic area's official services (ticketing/reservation/hotel booking), enabling one-click navigation to enhance the visitor experience.

General Knowledge Popularization / Professional Fields

01

Core Concept

Includes basic definitions, knowledge systems, and common misconceptions, covering domain terminology, knowledge system classifications, cognitive errors, and more.

02

Knowledge Topics

Includes in-depth analysis, related knowledge, and historical evolution, covering topic-specific deep dives, cross-domain connections, policy or technological developments, and more.

03

Practical Guides

Includes operational procedures, decision-making tools, and emergency plans, providing process flowcharts, calculators, professional guidance, incident handling guides, and more.

04

Policy Interpretation

Includes policy highlights and localized interpretations, offering policy texts, central vs. local regulation comparisons, and more.

01

Personal Profile

Including expert biography, career timeline, and social affiliations, showcasing expert titles, educational background, professional achievements, and more.

02

Research Fields

Including research area highlights, achievement presentations, and public lectures, explaining research directions, showcasing representative achievements, and sharing trend forecasts.

03

Publications and Achievements

Including academic publications, classic case studies, and patent introductions, providing major project reports, successful case analyses, patent information, and more.

04

Resources

Providing course materials download links, collaboration contact information, and more.

01

Course Center

Including course navigation, master classes, and micro-lecture collections, introducing course categories, expert teaching videos, short knowledge clips, and more.

02

Learning Resources

Including textbooks and supplementary materials, faculty profiles, and enrollment guides, providing e-textbooks, faculty directories, admission guides, and more.

03

Knowledge Graph

Including textbooks and publications, knowledge diagrams, student works, and campus panoramic views, displaying textbook covers, knowledge mind maps, outstanding student assignments, campus photos, and more.

04

Education News

Including policy updates, industry trends, and event registration, linking to policy columns, news aggregation pages, competition registration pages, and more.

Medical & Health

01

Navigation

Including disease prevention and treatment, pharmaceutical and medical device instructions, and policy express, providing disease management guides, drug package inserts, healthcare policy interpretations, and more.

02

Health Perspective

Including anatomical exploration, health codes, and medical technology, displaying anatomical charts, dietary pagodas, medical equipment operation scenarios, and more.

03

Medical Lecture Hall

Including disease classes, skills training, and medical popular science, explaining disease knowledge, skill procedures, general medical knowledge, and more.

04

Health Services

Providing online consultation, symptom self-assessment, emergency rescue links, and more.

Sports Events

01

Event Overview

Including event introduction, schedule and format, and historical archives, providing event information, schedule tables, historical data, and more.

02

Visual Gallery

Including highlight moments, venue displays, and equipment analysis, showcasing event photos, panoramic venue views, equipment structure diagrams, and more.

03

Media Resources

Including high-definition footage, live replays, and documentaries, providing event recordings, replay links, documentary resources, and more.

04

Interactive Zone

Providing direct links to official websites, media coverage, ticketing channels, and more.

Government Services

01

Policy Documents

Including regulations, administrative normative documents, policy papers, other documents, and policy interpretations, providing various policy documents and their explanatory guides.

02

Policy Infographics

Including policy diagrams and status charts, presenting policy interpretations through visual graphics and illustrations.

03

Service Explanations

Including official media news, government briefings, and media interpretations, explaining policies and services through video presentations.

04

Information Updates

Including government science popularization, government publicity, and informational news, providing policy education, promotional content, and industry updates.

05

Interactive Zone

Providing direct links to service halls and inquiry channels, facilitating government affairs processing and information access for users.

Enterprise Services

01

Corporate Showcase

Including company profile, certifications and honors, and development history, displaying corporate white papers, qualification certificates, development milestones, and more.

02

Products & Services

Including product portfolio, technical illustrations, and product photography, showcasing product lines, technical breakdown diagrams, product working visuals, and more.

03

Client Cases

Including solution demonstrations, operation guides, and client testimonials, providing solution presentations, operational tutorials, customer reviews, and more.

04

News & Updates

Including press center, industry insights, and partnership portal, linking to corporate website news, industry trend forecasts, partnership application pages, and more.

05

Image Production Process and Standards

Preparation

Select appropriate software tools: such as Photoshop 2022 for image processing, and Adobe After Effects 2022 for video processing.

Image Processing Powerhouse

Photoshop 2022 and above, professional image editing and design, precise matting, green screen compositing, enhancing visual effects.

AI Creative Assistant

Zhixiaotu Platform "Creative Painting," Jimeng AI and other intelligent generation tools, rapid response, innovative design, cross-platform compatibility.

Video Effects Master

Adobe After Effects 2022 and above, creating dynamic videos, green screen keying, animation effects, producing vivid scenes.

Step 1 - AI Generation of Original Character Images

Create character images. It is recommended to use the free "Creative Painting" feature on the Zhixiaotu Platform.

Step 2 - Creating a Green Screen Character Image in Photoshop

Use Photoshop to remove the image background and add a green screen.

1.Import the image into Photoshop, duplicate the layer, and set the original layer to invisible.

2.Select the duplicated layer, click "Select" at the top, then click "Subject." After the subject is selected, click "Select and Mask."

3.Use the brush tools on the left for detailed adjustments, and find

4.Select the duplicated layer, click the "New Layer" icon at the bottom, choose "Solid Color," add a green screen background, and export.

Step 3 - AI Generation of Green Screen Dynamic Videos

Use an AI video creation platform to transform green screen images into videos with motion effects. Two videos are required: one with dynamic speaking and one with static standby.

Select an AI Video Generation Platform

Upload the Green Screen Image and Add Motion Description Prompts

Preview and Adjust

Example prompt:

A female professional in a dark blue business suit, standing full-length facing forward. She wears a well-tailored dark blue blazer with a simple blue shirt underneath. She wears a matching knee-length skirt and black pointed medium-heeled shoes. The overall image is clear, with rich details and soft natural lighting

Example prompts:

Dynamic: Mouth speaking, natural blinking, hands making introductory gestures while speaking, body remaining stable, etc.

Static: Standby mode, natural blinking, smiling, body remaining stable, etc.

After review and confirmation, download and export the final videos.

Step 4 - Dynamic Keying and Rendering Composition

Use After Effects to remove the green screen background from the video, then render and export it as a transparent video.

1. After importing, click "Composition" and set the composition width to 750 and height to 1172. Hold down the Shift key to adjust the size.

3. Go to "File" → "Export" → "Add to Render Queue" → "Lossless."

2. Click "KeyLight (1.2)" and drag it onto the green screen video. Click the eyedropper tool on the left, then click on the green screen to remove it.

4. Change the format to QuickTime, change the video output channel to "RGB + Alpha," and click Render.

Step 5 - Exporting Dynamic GIF in Photoshop

Use Photoshop for transparent background and precise color control to export a dynamic GIF character.

1. After importing, go to "File" → "Export" → "Save for Web (Legacy)."

3. Crop a half-body shot as the avatar, with dimensions set to 800×800 pixels.

2. Check the "Image Size" settings, then click "Save."

4. For background images involved, you may use AI tools to generate them, then adjust the sizes in Photoshop:
Web dimensions: 1920×1080 pixels
Mobile dimensions: 750×1624 pixels
