

2026 Global Agent Competition - Track A (Agent Building Competition) - Scoring Criteria

I. General Rules and Scoring Method

1. Scoring Framework (four unified dimensions; 100 points in total):

- Technical Implementation: 30 points - technical completeness and quality of the built entry
- Application Value: 30 points - ability to solve real problems and deliver business value
- Innovation and Experience: 25 points - creativity, interaction, and technical novelty
- Presentation: 15 points - clarity and logic of the video explanation

2. Scoring Principle (evidence-based):

- Every score must be supported by specific content in the entry or test results; impressions alone must not be used.
- These criteria do not establish a threshold based on "featured / non-featured" status, and workspace entries do not involve skills content. The more complete and comprehensive the materials and persona are, the higher the score. The featured reference quantities in the handbook (e.g. documents ≥ 8 , characters ≥ 3000 , images ≥ 10 , videos ≥ 4 , and Q&A items ≥ 15) are only anchors for the full-score range. Scores decrease within that range according to coverage when these quantities are not met, down to 0 points.
- Score differentiation: use the full score ranges and avoid concentrating scores at a single value; the same quality issue should receive comparable scores across batches.
- Submission format: for Track A, the single "agent workspace" submitted by a competing team is the sole official entry unit (the system accepts only one workspace link). Each workspace must contain at least 10 valid agents. Reviewers

evaluate this single workspace and its agents as a whole; points are not calculated based on the total number of agents built by the team.

- Final score for a competition region = the average of the final scores given by all experts.

II. Compliance and Safety Gate (Disqualification Upon Any Violation)

The following are mandatory preconditions and are not included in the 100-point score. If any condition applies, the entry as a whole is deemed "Unqualified"; it will not proceed to dimension scoring and will lose eligibility for awards. Integrity or compliance issues involving plagiarism or infringement, illegality, serious safety violations, misuse of qualifications, falsified materials, failure to use a real name, or artificially inflating submission counts through duplicate or substantially identical content cannot be rectified to restore award eligibility. Only non-integrity technical issues, such as file formats, invalid links, or system compatibility, may be rectified and re-reviewed before the submission deadline in accordance with the organizing committee's notice.

- Infringing materials; third-party watermarks; vulgar, illegal, sensitive, or pornographic content
- Knowledge bases containing false information, discriminatory content, sensitive information, or large amounts of outdated information
- Account not verified participant identity, or submitted using an online alias / code name (in accordance with applicable local requirements)
- Reuse of knowledge-base materials, personas, or Q&A content across agents, workspaces, or tasks
- Dialogue that guides users to leave private contact details, redirects users to external channels for unauthorized transactions or communications, or solicits unauthorized off-platform payments
- Displaying enterprise / organization information without complete authorization proof, or misusing a third party's qualifications

- Forging material-authorization documents, test cases, or real-name verification information
- A submission that is not a compliant workspace, or a workspace with fewer than 10 valid agents (each agent must be independently complete and usable; the same agent may not be repeatedly submitted to inflate the count; supplementary provisions for Track A review).

Dimension 1: Technical Implementation (30%)

No.	Scoring Item	Points	Assessment Criteria	Baseline for Compliance (Handbook Threshold)	Treatment for Non-compliance / Scoring Range
1.1	Clarity of Role Definition and Positioning	4	Whether the name intuitively reflects the industry and function; whether the role description covers the four elements of core responsibilities, service recipients, communication style, and guiding prompts.	The name is unambiguous and contains no sensitive words; the role description includes all four elements.	Inappropriate name: -1; -0.5 for each missing description element; 0 points if completely absent.
1.2	Persona Design and Production Quality	9	Whether a dedicated persona is produced (character modeling / persona generation); persona clarity; synchronization	Dedicated persona with clean edges and background (3 points); lip movements synchronized with voice and no dropped frames (3 points); visual style, professional attire,	Original / customized persona: 6-9 points based on quality; platform built-in persona: maximum 6 points for this item (original work is

			of lip movements, expressions, and voice; and alignment of visual style with industry positioning. (This is a key differentiator between "featured" and "non-featured" entries: a produced persona scores notably higher than a default draft.)	and industry positioning are consistent (3 points).	encouraged); default draft only, with no independent persona: maximum 3 points. Deduct according to the corresponding 3-point criterion for each flaw.
1.3	Knowledge Base and Supporting Materials	12	Breadth and quality across five elements: documents, images, videos, Q&A, and material naming (Handbook 3.2.3). More comprehensive materials earn higher scores. This is the highest-weight item in Technical Implementation and reflects the principle that featured entries (with more materials) score	Full-score range anchors (featured reference quantities): documents ≥ 8 , characters ≥ 3000 , in PDF/Word format (4 points); images ≥ 10 , JPG/PNG $\geq 720P$, no watermark (3 points); videos ≥ 4 , seconds ≥ 30 , MP4 $\geq 1080P$, (3 points); ≥ 15 Q&A entries with category tags bound and default-room Q&A enabled (2 points).	More comprehensive materials earn higher scores, decreasing within the full-score range by coverage: 12 points at featured reference quantities; 7-11 points if relatively comprehensive but below target (e.g., 4-7 documents, 5-9 images, 1-3 videos, 8-14 Q&A entries); 3-6 points for few materials (only a

			higher.		small number of documents / images); 0-2 points for almost no knowledge base. Deduct 0.5 for every material name that is only a numeric serial number.
1.4	Room / Scene Configuration and Functional Completeness	5	Specifications of Web / mobile background images, menu categorization, reasonableness of room-scene configuration, and whether core interactions can be completed.	Web background: 1920x1080; mobile: 750x1624; both clear and watermark-free (2 points); menu categories are clear and accessible (1.5 points); room-scene configuration is reasonable and core interactions can be completed (1.5 points).	Complete: 5 points; -1 for each flaw in background / menu; -2 for unreasonable scene configuration or a broken core interaction.

Dimension 2: Application Value (30%)

No.	Scoring Item	Points	Assessment Criteria	Baseline for Compliance (Handbook Threshold)	Treatment for Non-compliance / Scoring Range
2.1	Clarity of Scenario and Authenticity of Need	8	Whether target users / industry scenarios are clear; whether the need is a real pain point (supported by research, business data, or real cases).	Scenario description is clear and the need is verifiable.	Clear scenario and genuine need: 8 points; vague scenario: -3; fabricated need / use of a generic template: -4.

2.2	Business Closed Loop and Functional Completeness	10	Whether the core business process can be completed end to end; whether the primary flow is broken or key functions are missing.	Core workflow is usable and key functions are complete.	Complete: 10 points; -2 for one missing non-critical function; 0 points for a broken primary workflow / missing key function.
2.3	Practical Effectiveness and Scalability	7	Accuracy of test dialogue responses and coherence over multiple turns; whether has cross-scenario scalability.	Answers are accurate and factually correct, with coherent multi-turn dialogue; reusable and scalable.	Accurate, coherent, and scalable: 7 points; occasional factual error: -2; not scalable: -2; numerous errors / not practically usable: 0 points.
2.4	Workspace Completeness and Agent Coverage Quality	5	Whether the submitted workspace is complete and compliant, with all core configurations; whether its ≥ 10 agents are independently usable, clearly positioned, and cover scenarios / industries with a certain breadth or professional	The workspace is complete and compliant and includes ≥ 10 valid agents; it covers ≥ 3 clearly defined scenarios / industries, and every agent is independently usable with core interactions working end to end.	Complete, compliant, and broad / deep coverage (5 points); workspace basically complete and ≥ 10 valid agents but scenarios are singular / highly overlapping (3 points); only barely reaches 10 and is highly homogeneous

			depth, without duplicate padding.		(2 points); incomplete workspace or fewer than 10 valid agents (0 points and triggers gate review).
--	--	--	-----------------------------------	--	---

Dimension 3: Innovation and Experience (25%)

No.	Scoring Item	Points	Assessment Criteria	Baseline for Compliance (Handbook Threshold)	Treatment for Non-compliance / Scoring Range
3.1	Creativity and Differentiation	15	Whether the role, scenario, and approach are innovative and distinct from mass-produced template-based entries.	Clearly identifiable and innovative.	Significant innovation (15): proposes an industry-specific workflow or distinctive persona not covered by existing platform templates and is recognizable at first glance; differentiated (10): customizes scenarios / prompts on a generic template but retains a similar framework; conventional (5): highly consistent with common

					templates, with only industry terms replaced; identical (0): directly uses another person's work / example without changes.
3.2	Interactive Experience and Emotional Engagement	10	Naturalness of multi-turn dialogue, persona expressiveness (lip movements / expressions), and overall fluency of the user experience.	Natural, smooth, and emotionally engaging.	Natural and smooth (10): no repetitive follow-up questions across turns; synchronized lip movements and expressions; memory and emotional responsiveness; basically usable (6): dialogue can be completed but occasionally repeats, answers off-topic, or has stiff expressions; rigid and laggy (2): frequent intent misunderstanding, long pauses, or mechanical recitation.

Dimension 4: Presentation (15%)

No.	Scoring Item	Points	Assessment Criteria	Baseline for Compliance (Handbook Threshold)	Treatment for Non-compliance / Scoring Range
4.1	Demonstration Completeness	15	Whether the demo is smooth	The demonstration is complete and	Completeness: 7 points; -3 if some

	and Results Presentation		and core functions are validated.	core functions are verifiable.	functions are not demonstrated; clarity and accuracy of presentation: 8 points.
--	-----------------------------	--	---	-----------------------------------	--

III. Rating Levels and Use of Results

Rating	Range (Expert Score)	Description
Excellent	> =90	Near-perfect, with only very minor flaws; suitable for demonstration and broader adoption.
Good	80-89	Overall good quality, with a small number of areas for improvement.
Fair	70-79	Basically meets requirements but has clear shortcomings that need optimization.
Needs Improvement	60-69	Core functions are usable, but multiple items do not meet requirements and require focused iteration.
Unqualified	<60	Has serious defects or triggers the compliance gate; ineligible for awards.
